

Infor CRM Compatibility Guide

Updated October 2015

Includes compatibility for Infor CRM versions 8.1.0.6 through 8.2, Saleslogix versions 7.5.3 through 8.1.0.5, and Mobile versions 3.0.4 and later.

Infor CRM Compatibility Guide

Updated October 2015

Contents

Key	2
Infor CRM System Requirements	3
Mobile System Requirements (v3.0 through 3.3.x)	17
Important Information	20

Key.

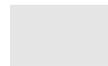

The software requirements show all qualified software for use with versions of Infor CRM and of Saleslogix that have not reached end of life.

Q Component is tested and qualified for version. Troubleshooting assistance is available with Support plan.

Note: When a service pack number is listed instead of either “Q” or “S”, the version is qualified to work on that service pack, unless a superscript number indicates otherwise.

S Component is not tested for version. Troubleshooting assistance available with Support plan.

NC Component is not compatible for version. Troubleshooting assistance is not available.

 A blank, gray box indicates the version of the software was not available until after this version of the listed product was released².

Notes:

- Saleslogix is now Infor CRM. Some installed components and registries have retained the name Saleslogix.
- All hardware requirements listed are for Infor CRM / Saleslogix components and are in addition to requirements of any third-party product that will be or may be already installed on computers in your organization.
- Compatibility for supported versions of Saleslogix 7.5.2 and earlier, Mobile 3.0 through 3.0.3, and for Mobile Classic is available in archived versions of the Compatibility Guide available on Infor Xtreme: www.inforxtreme.com.

Infor CRM System Requirements

Version	v7.5.3	v7.5.4	v8.0 ⁵	v8.1	V8.2
Windows Client					
Hardware¹					
Memory: minimum/recommended (MB)	256/512+	256/512+	2GB/4GB	2GB/4GB	2GB/4GB

Oracle Client/OLE DB Provider Compatibility: Oracle Client software is a required component on each machine making a connection to an Oracle database. Though the Oracle Client software may be cross-compatible between versions, it is assumed that, when possible, the installed Oracle Client software matches the Oracle server version. If the Oracle OLEDB Provider DOES NOT match the major release version of the database software, it is assumed that the OLEDB components will be the latest available from the vendor.					
Email Servers

<p>^M Mobile v3.0.4 can be installed on Saleslogix v7.5.3 and v7.5.4. Be sure to install the version specific to 7.5.4 not the version for 8.0 and later. Some features in Mobile leverage the advancements provided by Saleslogix 8.0 and later and so must be modified to be compatible with Saleslogix v7.5.4. See the document called <i>Installing or Upgrading to Saleslogix Mobile v3.0.4 for 7.5.4</i> for more information.</p>				
Browsers				
<p>In addition to the browsers in the supported native operating systems, Mobile v3.0.4 and later is compatible with the following:</p> <p>Microsoft Internet Explorer 10, Chrome, Firefox.</p>				
License Types				
Standard		Q	Q	Q
Advanced		Q	Q	Q
Premier		Q	Q	Q

Notes

¹ Hardware requirements are intended as a guideline. As Infor CRM / Saleslogix is highly customizable, hardware requirements will depend on the number of users, activities, database size, number of records, operating systems, and RDBMS, among other factors. Microsoft Windows 7 and later, and Microsoft Windows 2008 and later typically require more powerful hardware. Performance for the Web Client components is also impacted by browser type and version, and by connection bandwidth.

² Infor generally does not perform additional qualification testing on a released version of Infor CRM/Saleslogix with new enterprise packs for operating systems and applications.

³ In Saleslogix v7.5.4, Active Mail was ported into Desktop Integration, which is qualified for Firefox 3.6.x.

⁵ When installing Saleslogix v8.0 on a 64-bit system, Export to Excel, Send SLX, and Mail Merge require integration with 32-bit versions of Microsoft Office products. See the Saleslogix Implementation Guide for additional environment-specific adjustments to installation.

⁶ NET Framework is required if hosting a portal (for example, remote client).

⁷ IIS must run in v6 compatibility mode for all versions including Saleslogix v8.0 and v8.1.

⁸ Microsoft Windows 2008 requires Crystal Reports XI R2 SP4 or later.

⁹ When installing Saleslogix v8.1 on a 64-bit system, items available from the Saleslogix Web and Offline Web Client Write menu (including Mail Merge) require integration with 32-bit versions of Microsoft Office products. However, all other locations for accessing email in the Saleslogix Web and Offline Web Clients will function with Outlook 64 bit. For additional environment-specific adjustments to installation, see the Saleslogix Implementation Guide.

¹⁰ In Saleslogix v8.1 and later, the Outlook sync feature is independent of the Saleslogix Client and can therefore use the 64 bit version of Microsoft Outlook 2013 to sync contacts, activities, and tasks.

¹⁴ Works with Saleslogix v7.5.3 with HF1, HF2, HF3, and SData core portal.

¹⁵ Saleslogix 7.5.3 hot fix 10 enables support for synchronization on the Remote Client. This hot fix is not required if your installation does not include Remotes.

¹⁶ For all installations except Web Reporting, Saleslogix installs Microsoft .NET Framework v4.0 if it is not detected on the computer. Having earlier versions of .NET installed alongside 4.0 will not create a problem. Microsoft .NET Framework 2.0 is required for Web Reporting.

¹⁷ Microsoft Office 365 (standard download and Click to Run download) is supported for Saleslogix v8.1 Web and Offline Client users. The Microsoft Office 365 Desktop Client must be installed to support integration with Saleslogix. For Mail Merge support, see KB Article #1408965059.

Windows Client	Microsoft Office 365 Desktop Clients
Infor CRM 8.2/ Saleslogix 8.1 Web Client	Outlook sync – Contacts Outlook sync – Tasks Outlook sync – Calendar items Email SendSLX Email Record to History Export to Excel SLX Address book Vcard support Attach Sales Library items For Mail Merge support, follow the instructions in KB Article #1408965059.
Infor CRM 8.2/ Saleslogix 8.1 LAN Client	Qualified with Saleslogix v8.1 SNC 03. Follow the instructions in KB Article #1408965059 to enable Mail Merge support.

¹⁸ Support for Oracle on Saleslogix v8.1 requires SNC Update 02 and Web Core Update 02 for Saleslogix v8.1.

¹⁹ For all OS, 32 and 64-bit are supported.

²⁰ Microsoft SQL Server 2012 (any version) cannot be installed on the XP operating system. When upgrading your database to Microsoft SQL 2012 and then creating remotes using SQL Express 2012, any remote users running Windows XP will not be able to attach the remote database because they cannot install SQL Express 2012

²¹ NET 4.0 is installed in Integration mode. .NET 2.0 is installed in Classic mode to accommodate Crystal Reports.

A supported version of Microsoft .NET Framework must be installed on the Web Host server in order to support Internet Explorer 10.

- o Microsoft .NET Framework v4.5.1 (recommended) - This version of .NET Framework will run concurrently with versions 3.5 and earlier, but will replace .NET Framework versions 4.0 and 4.5. Microsoft .NET Framework 4.5.1 can be downloaded from the Microsoft site:

<http://www.microsoft.com/en-us/download/details.aspx?id=41641>

Note: This link was valid at the time this document was distributed, however the location may have changed. If this link is no longer valid, search the <http://www.microsoft.com> site for ".NET Framework 4.5.1" for the correct location.

- o Microsoft .NET Framework v3.5.1 - If your environment does not support Microsoft .NET Framework v4.5.1, then you must apply two Microsoft hot fixes to Microsoft .NET Framework v3.5.1 to provide support for Internet Explorer 10.

These hot fixes can be downloaded from: <http://support.microsoft.com/kb/2600100>

<http://support.microsoft.com/kb/2608565>

Note: These links were valid at the time this document was distributed, however the locations may have changed. If links are no longer valid, search the <http://www.microsoft.com> site for "KB2600100" and "KB2608565".

²² When installing on 64-bit systems, run in native compatibility mode.

²³ Saleslogix Advanced Analytics v 1.0 is replaced by v 1.1, which can be used with both Oracle and SQL.

²⁷ Sync for Gmail v1.0.1 is only available for Saleslogix Web and Windows host database environments.

²⁹ When installing Desktop Integration with Office 2007, you must be logged on as a user with Administrative rights.

³² The Saleslogix 8.1 SNC and Web Core updates are recommended for ICAA v3.0 when processing large datasets through the Job Server.

Notes for Enabling Support for Microsoft Windows 8, Windows Server 2012, Office 2013, Internet Explorer 10, and Firefox 17 on Saleslogix v8.0

²⁴ Updates to Saleslogix version 8.0 include fixes to enable support for Microsoft Windows 8, Windows Server 2012, Internet Explorer 10, and Firefox 17. Use the following table to determine which updates are required for each operating system and/or browser. See the document called *Installing Saleslogix on Microsoft Windows 8, Windows Server 2012, and Internet Explorer 10* for additional required installation steps. This document is available in the Update zips.

²⁵ Desktop integration does not work with Firefox 17. If your Saleslogix Web Client implementation includes Desktop Integration, do not use Firefox 17.

²⁶ When Saleslogix 8.0 LAN Client implementations include both Advanced Outlook Integration and Microsoft Outlook 2013, install 8.0 SNC Update 08. No other compatibility issues with Microsoft Office 2013 programs have been identified.

²⁸ Click to Run for Office 2013/365 is not supported in Saleslogix v8.0.

8.0 Updates	Windows 8	Windows Server 2012	Internet Explorer 10 ²¹	Outlook 2013
8.0 Update 02	X			
8.0 Core Update 02 and later	X	X	X	
8.0 Model Update 02 and later		X	X	
8.0 Update 03		X		
8.0 Update 05		X
